CAREER OBJECTIVE

Focused on building efficient and user-centric web applications, I specialize in Node.js and ReactJS, with a strong understanding of modern development practices. I value clean, maintainable code and enjoy solving real-world problems through technology. Seeking a challenging role where I can contribute to meaningful projects, collaborate with skilled professionals, and continue growing as a full-stack developer.

EDUCATION

Bachelor of Computer Engineering

School of Engineering, Pokhara University

+2 | Science Stream

Karunanidhi Higher Secondary School

PROJECTS

Worstgpt (<https://worst-gpt.vercel.app>)

- Designed and implemented a responsive frontend for WorstGPT, a sarcastic AI chatbot, using React.js, Vite, and Tailwind CSS
- Built reusable components (Navbar, Hero, Features, Pricing, Chat UI) with dark/light mode support for a modern user experience
- Integrated JWT authentication with email/password and Google OAuth, along with Gmail-only signup and email verification
- Developed a credit-based freemium model with monthly reset, daily limits, and Stripe subscription integration for premium users
- Implemented backend services using Node.js, Express, and TypeScript with MongoDB for user and usage tracking
- Connected to DeepSeek V3 API for generating sarcastic chatbot responses, with rate limiting and credit deduction middleware
- Deployed and optimized for performance

Workhub

- Designed and developed a freelancing platform where users can post gigs, offer services, and hire freelancers
- Built the frontend with React.js for a responsive and user-friendly interface
- Implemented backend services using Node.js and Express with MongoDB for secure data management
- Integrated authentication and authorization for freelancers and clients with role-based access
- Developed features such as gig posting, search & filter, hiring workflows, and order tracking
- Ensured scalability, performance optimization, and cross-device compatibility

PROJECTS

GharBhada

- Built a platform for house rentals, enabling property owners to list their houses and tenants to search and rent
- Developed a responsive frontend with React.js for seamless property browsing and booking experience
- Implemented backend services using Node.js and MongoDB for property management, user authentication, and rental transactions
- Added features like property listing, search & filter, owner-tenant communication, and booking management
- Ensured cross-device compatibility, optimized performance, and secure data handling

TECHNICAL SKILLS

Programming Language: JavaScript

Design & Styling: TailwindCSS, ShadCN

Libraries/Frameworks: ReactJS, NextJS, NodeJS, React Native

Tools/Platform: Git, Github, Docker, WebSockets

Database: PostgreSQL, MongoDB, MySQL, Firebase

OS: Windows, Linux

ADDITIONAL INFORMATION

- **Communication & Collaboration:** Strong verbal and written communication skills, collaborative team player with experience working in diverse, cross-functional teams
- **Continuous Learning:** Actively engaged in staying up-to-date with emerging technologies, best practices, and industry trends through online courses and technical blogs
- **Languages:** English, Nepali, Hindi
